

What is LineOne?

LineOne is a configurable, web-based self service portal designed for corporate employees to reset their own voicemail passwords, phone PINs, speed dials, zero out extensions, call forwarding numbers, simultaneous ring settings, phone labels, voicemail notification preferences (i.e. via phone, email, text, etc.), find me settings, and more. Changes are immediate. No waiting. No support calls. No work tickets. No expense.

Configure LineOne to work with YOUR business

LineOne enables a telecom or IT administrator the ability to configure which settings can be viewed and changed by an employee together with the option of defining the help content and the field labels. Additionally, LineOne can be configured to match a company's intranet or corporate style guide.

Works in simple and complex telecom environments

LineOne handles changes for phone AND voicemail systems in single AND multi-vendor environments all on ONE screen. It can also combine phone and voicemail changes on one screen. Additionally, LineOne is platform independent and web-based. It works with today's most popular browsers including Internet Explorer®, Safari®, Firefox®, and others. LineOne is also mobile and works with tablet devices.

Benefits

The benefits of using LineOne are immediate and measurable. They include reduced operational expense, stronger security, and improved internal customer service levels.

Reduce operational costs

Telecom and IT managers responsible for budgeting and cost reduction will benefit greatly from LineOne. Because changes made in LineOne are sent directly to the voice system, it eliminates the need for employees to call a Telecom Administrator or IT Help Desk for assistance. In fact, LineOne reduces telecom support calls and their related work tickets by up to 40%. The result is a significant amount of savings that can be applied to other initiatives. In some cases, the

return on investment payback period will be measured in weeks instead of months or even years.

Strengthen security

LineOne is not only secure in its own right, it also helps to improve telecom security throughout your organization.

Because LineOne can be configured to specify exactly what phone and/or voicemail attributes are made available to employees, LineOne eliminates the risk of unauthorized changes or access. LineOne further strengthens security because it does not allow employees to directly "touch" the telecom systems. LineOne acts as a buffer between your employees and your systems.

Additionally, LineOne uses Active Directory® to identify the user and determine their phone and voicemail assets. Because of this, employees are only able to access the phone and voicemail assets for which they are responsible.

Each change is validated for additional security, and all LineOne changes are verified by sending an email to the employee as soon as the change has been made.

Improve internal service levels

LineOne is a perfect way to improve internal service level agreements. Changes made by employees become effective immediately and access to the self service site is available 24/7/365 from home or anywhere in the world with internet

access. There is no waiting or frustration.

LineOne will also help you to quickly keep your employees connected. For example, employees can use LineOne to immediately change their mobility settings such as call forwarding numbers, simultaneous ring settings, voicemail notification preferences (i.e. via phone, email, text, etc.), and find me settings to determine how and where they want to be reached when they are out of the office.

Features

With LineOne, telecom and IT departments will benefit from the following features:

- ▶ **Configurable** – Configure LineOne to determine what an employee is able to view and change. The telecom and IT department can also configure LineOne's help content and field labels. This provides the ability to use the terminology and communicate policy (i.e. password length) that is consistent with YOUR company LineOne's configurator also enables you to launch a self service initiative with a limited number of fields, while providing you with the flexibility to add additional fields over time.
- ▶ **Easy-to-use interface** – LineOne makes it easy for employees to make changes and manage their own telecom environment. In fact, it is so well designed and intuitive, that no employee training is needed.
- ▶ **Works with existing intranets or portals** – Easily integrate LineOne into your secure company intranet site. This provides a convenient and easy place to access LineOne. You can even configure LineOne to match your existing intranet site or corporate style guide.
- ▶ **Easy to access** – LineOne is designed to be a part of your intranet. Therefore, you can choose how employees reach it within your own corporate site. When they do, they won't need an additional password. You have the option of either allowing them immediate access using Windows® Single Sign On, or providing the same network credentials they use to log into the network. No more searching for the right portal or the password required there.
- ▶ **Active Directory® authentication** – Once you've logged onto your computer, LineOne uses your validated Windows® credentials to find your phone and voicemail assets eliminating the LineOne login step.
- ▶ **Optional Windows single sign on** – Once you've logged into your system, LineOne is able to identify who you are by using Active Directory® authentication. If desired, there is no need for an additional LineOne login.
- ▶ **Immediate changes** – Employee changes take effect immediately, and an email confirming the change is sent to the employee within seconds.
- ▶ **Multi-vendor and multi-system compatible** – LineOne works great in single-vendor and single system environments, but is also compatible with multi-vendor and multi-system environments.
- ▶ **Multi-tenant compatible** – Leverage all of LineOne's features and benefits even in complex, multi-tenant environments.
- ▶ **Consistent interface across systems** – LineOne uses a single, consistent interface regardless of the system type. Your employees will find it just as easy to make changes to their phone as it is to change their voicemail settings. Even making changes across vendor types such as Avaya®/Nortel®, Cisco®, AVST®, and others is simple. Issues caused by different system types and vendors disappear with LineOne.

Are we compatible?

Unimax software is compatible with leading PBX, voice messaging and unified communications systems from Avaya®, Cisco®, Legacy Nortel®, Microsoft®, AVST® and others. For more information on specific system compatibility, please email us at TellMeMore@unimax.com.
